AEGNS Feature Codes

Introduction

AEGNS offers special programs or “features” that provide enhanced functionality through specific messages on the Network. These features are identified with a Feature Code listed in the following table and have specific code related edits. Refer to the *Business and Operational Policies* and Network Specifications manuals for more complete information on the features and associated edits.

AEGNS Feature Codes

Code	Feature	Description
02	ZIP Code Verification (ZCV)	The ZIP Code Verification (ZCV) Program is aimed at reducing fraud by allowing participating S/Es to submit the Cardmember’s billing address ZIP Code on the POS Authorization Request (1100) message for Issuer validation.
AD	ATM Disputes	The ATM Disputes Automation feature automates the process allowing the submission of Retrieval Requests, Fulfillment Notifications, Second Presentments, and Chargebacks through the Network for ATM transactions.
CD	Cash Disbursement	Cash Disbursement is a feature that enables a Cardmember to get cash in a Cardmember Present Transaction at participating AEGNS Participant banks.
NS	No Signature/No PIN Program	The No Signature/No PIN Program (NS) allows a participating S/E to process a Card Present Transaction without a Signature or PIN if requirements in the <i>Business and Operational Policies</i> manual are met.

Usage

All feature edits are fully explained in the *Business and Operational Policies* and Network Specifications manuals. Values that have specific edits for certain features are in the *Codes Reference Guide*.

Feature Code Validity

AEGNS uses a “•” in the code tables to show what code is valid in a message. For example in the Message Reason Code table below, the “•” in the Message Type column indicates the Message Reason Code is valid for that Message Type.

Some features may be restricted from using certain code values (e.g., Merchant Category Code, Message Reason Code, etc.).

Examples

Using the example below, the “•” indicates the Message Reason Code is valid with the Message Type indicated in the column. The values CD, 02 and AD are associated with a feature and indicate the Message Reason Code is valid for that feature. If there is not a feature code listed and the transaction is associated with one of the listed features, that Message Reason Code is **not** valid for the transaction.

The example below shows that Message Reason Code 2700 is valid for the 1240, 1640, and 1642 message types with restrictions. If the transaction is a Cash Disbursement transaction, Message Reason Code 2700 is valid for the 1240 and 1640 messages. If the transaction was accepted by a merchant certified for the ZCV (02) or ATM Dispute (AD), then Message Reason Code 2700 (Per local regulation proof of government id validation can not be provided) is valid for the 1642 message.

Message Reason Code	1240	1304/1314	1420	1442	1640	1642	1824	1844	9324	9334	9344
2700	• CD				• CD	• 02 AD					

Black Background

A black background indicates a Network generated code, as shown in the example below. These codes should not be generated by Participants.

Addenda Type Codes

Overview

The Addenda Type Code classifies the category of information contained in an Addendum Message. If Addenda Type Code 03 (Industry Specific Detail Addenda Messages) is used, then the Format Code categorizes the Industry Specific Detail Addenda Messages into specific industries. Use the Addenda Type Codes in these records:

Records

Record Name	Message Type	Position	Field Name
Airline Industry Specific Detail	9240/9340	5-6	Addenda Type Code
Auto Rental Industry Specific Detail	9240/9340	5-6	Addenda Type Code

Action Codes

Overview

The Action Code defines the type of action taken or to be taken within the context of a particular message. There are two groups of Action Codes, each group to be used only with certain Message Types.

Group 1 Action Codes - Authorizations

Use the Group 1 Action Code values in these records:

Records

Record Name	Message Type	Position	Field Name
POS Authorization Response	1110	Bit 39	Action Code
POS Authorization Advice	1120	Bit 39	Action Code
POS Authorization Advice Response	1130	Bit 39	Action Code
Payment Token Provisioning Response	1110	Bit 39	Action Code
Payment Token Post Provisioning Notification	1120	Bit 39	Action Code
Payment Token Post Provisioning Notification Response	1130	Bit 39	Action Code
ATM Financial Transaction Response	1210	Bit 39	Action Code
POS Authorization Adjustment Financial Advice Response	1230	Bit 39	Action Code
Real Time Exception Response	1314	Bit 39	Action Code
POS and ATM Reversal Advice Response	1430	Bit 39	Action Code
Network Management Response	1814	Bit 39	Action Code

The following table supplies the value and description for each Action Code. For each message type, a “•” indicates that the code is valid and a blank indicates the code is not valid.

Note: Any Action Code sent from an Issuer on a POS Authorization Response (1110) that is not supported by the Network Authorization system will be converted to Action Code 100 - Deny before being sent to the Acquirer.

Credit Codes

Overview

The Credit Code is used in the Preferred/Delinquent File to determine any changes to the base credit limit for preferred or delinquent Cardmembers. This field requires a hexadecimal value. Use the Credit Codes in this record:

Records

Record Name	Position	Field Name
Preferred/Delinquent File	42	Credit Code Preferred

This table supplies the value and usage for each Credit Code:

Currency Codes

Overview

The Currency Code table identifies currencies and decimalization values by their ISO 4217 codes. Currency Codes are listed alphabetically by country. Additional sorting of Currency Codes can be done by downloading the Codes Excel File from Knowledge Base.

Use the Currency Codes in these records:

Currency Codes (Alphabetical Order by Country)

Overview

This table supplies the value and description for each valid Currency Code. The code description includes the name of the country or entity, the name of each valid currency for the country, the numeric and alphabetic ISO Currency Codes associated with each currency, the currency usage, and the currency decimalization.

The currency usage identifies presentment (P), settlement (S), transaction (T), and prohibited country (X) currencies. A presentment currency can only be used as a presentment. A settlement currency can be used for both presentment and settlement. A transaction currency can only be used for transactions and must be converted for presentment and settlement. Prohibited Country currencies are those with which American Express is prohibited from doing business with due to economic sanctions. No currency information is shown for these countries.

Device Properties Code

Overview

Device Properties are up to four (4) unique codes that describe the properties of the functions of the device (ATM) at this location (e.g., deposits accepted, restricted access, security camera on site, surcharge, etc.). Use the Device Properties Codes in this record:

Records

Record Name	Message Type	Position	Field Name
Program Specific Data Collection Messages - ATM Location List	9344	521-530	Device Properties Code

This table supplies the value and description for each Device Properties Code:

Device Properties Codes

Description	Bytes	Position	Value
Camera on site	1	521	Y/N
Surcharge	1	522	Y/N
Accept Deposit	1	523	Y/N
Dispenses Stamps	1	524	Y/N
Dispenses Transportation Tickets	1	525	Y/N
Dispenses Events Tickets	1	526	Y/N

File Name Codes

Overview

The File Name Code is a part of the Data Collection Message standard. This code identifies the name of the file being submitted to or sent from the Network, the Fraud Repository, or any other specific program administrators that use Data Collection Messages. Use the File Name Codes in these records:

Records

Record Name	Message Type	Position	Field Name
Daily Activity File (DAF) File Trailer	1325	97-113	File Name Code
Fraud Repository Update/Response	9324/9334	80-96	File Name Code

Fraud Indicators

Overview

The Fraud Indicator field is used to provide fraud mitigation indicators for a variety of situations including:

- [5CSC Indicator](#)
- [Dynamic Fraud Management Network Services Recommendation Codes](#)
- [AEVV Validation Results](#)
- [AEIPS and Expresspay Cryptogram Validation Results](#)
- [PIN Validation Results](#)
- [EMV Data Results](#)
- [ATC Validation Results](#)
- [Cardmember Traveling Indicator](#)
- [4CSC Indicator](#)
- [Payment Token Expiration Validation Result](#)

Listed below are the valid codes and descriptions for Bit 62 - Fraud Indicator.

Use the Fraud Indicator in these records:

Records

Record Name	Message Type	Position	Field Name
POS Authorization Request	1100	Bit 62	Fraud Indicators
Payment Token Provisioning Request	1100		
POS Authorization Advice	1120		
Payment Token Post Provisioning Notification ¹	1120		
ATM Financial Transaction Request	1200		

1. Bit 62 contains spaces in the Payment Token Post Provisioning Notification (1120) message.

5CSC Indicator

The CSC Indicator is delivered in Bit 62 to indicate whether the 5CSC received in the authorization message matches the expected 5CSC value.

This table supplies the value and description for each 5CSC code:

5CSC Codes

5CSC	Description
00	CSC valid with CSC Version 1.0
01	CSC blank/zeros
02	CSC not valid/mismatch
03	CSC validation not performed - track data not present
04	CSC validation not performed - HSM (Host Security Module) not available
05	CSC validation not performed - Key not found
06	CSC validation not performed - HSM error
07	CSC validation not performed - HSM time-out
08	CSC valid with American Express hardware key
09	CSC valid with American Express software key
10	CSC valid with American Express 5CID
14	CSC validation not performed - Contactless magstripe mode transaction
15	CSC valid with CSC Version 2.0
16	CSC validation not performed (Example, Invalid Merchant)

Dynamic Fraud Management Network Services Recommendation Codes

DFMNS Recommendation Codes can contain a combination of 5CSC validation, probability score, and rule recommendations. These Network-populated codes are passed to certified Issuers (in Bit 62 - Fraud Indicators) to indicate the fraud risk associated with a transaction.

Use the DFMNS Recommendation Code in these records:

Records

Record Name	Message Type	Position	Field Name
POS Authorization Request	1100	Bit 62	Fraud Indicators
Payment Token Provisioning Request	1100		
POS Authorization Advice	1120		
Payment Token Post Provisioning Notification	1120		

This table supplies the value and description for each DFMNS Recommendation Code:

12	HSM Time Out - Downgrade
13	Other Reason - Downgrade
14	Cryptogram Validation Not Performed

PIN Validation Results

The PIN Validation Result provides the Issuer with the outcome of the PIN Validation.

This table supplies the value and description for each PIN Validation Result:

PIN Validation Result Codes

Code	Description
00	Online PIN validation not performed
01	Pass online
02	Pass offline
03	Failed online
04	Failed offline
05	Failed locked online
06	Failed locked offline

08	Locked offline
09	Offline PIN validation not performed - unknown
10	Offline PIN validation not performed - PIN bypass
11	Offline PIN validation not performed - PIN Pad not present/not functioning

EMV Data Results

Subfield 1 - Offline data authentication results

Offline Data Authentications Results Codes

Code	Description
00	Not performed
01	Pass
02	Fail SDA
03	Fail DDA
04	Fail CDA

Subfield 2 - Offline PIN Locked

Offline PIN Locked Codes

Code	Description
Y	Offline PIN Locked (Offline PIN Try Counter exceeded based on Data Field 55)
N	Offline PIN NOT Locked (Offline PIN Try Counter exceeded based on Data Field 55)

Subfield 3 - Unsuccessful EMV script execution

Unsuccessful EMV Script Executions Codes

Code	Description
Y	Last script unsuccessful (based on Data Field 55)
N	Last script NOT unsuccessful (based on Data Field 55)

ATC Validation Results

The ATC Validation Results provides the Issuer with the result of the ATC Validation.

The following table shows the value and description for each ATC Validation result:

ATC Validation Result Codes

Code	Description
00	ATC Valid
01	ATC High
02	ATC Low
03	ATC Replay
04	ATC above range for new ATC
05	ATC First Observed
06	ATC Unable to be validated - ATC not numeric
07	ATC Not Validated - Cryptogram Failed
08	ATC Validation Not Performed

Cardmember Traveling Indicator

The Cardmember Traveling Indicator provides Issuers with notification when a Cardmember is outside their home country.

The following table shows the value and description for each Cardmember Traveling Indicator result:

Cardmember Traveling Indicator

Code	Description
0	Cardmember Not Traveling
1	Cardmember Traveling

4CSC Indicator

The 4CSC Indicator is delivered in Bit 62 to indicate whether the 4CSC received in the authorization message matches the expected 4CSC value.

This table supplies the value and description for each 4CSC code:

4CSC Indicator

Code	Description
00	CSC valid
01	CSC blank/zeros
02	CSC not valid/mismatch
03	CSC expiration date absent
04	CSC validation not performed - HSM (Host Security Module) not available
05	CSC validation not performed - Key not found
06	CSC validation not performed - HSM error
07	CSC validation not performed - HSM time-out
08	CSC valid with American Express hardware key
09	CSC valid with American Express software key
12	CSC Matched 4 byte for 3CSC
14	CSC validation not performed - Contactless Transaction
15	CSC valid with iCSC
16	Matched 4 bytes for i3CSC
18	CSC not present in authorization / missing

Payment Token Expiration Validation Result

The Payment Token Expiration Validation Result code provides Issuers with a Payment Token Expiration expiration status.

The following table shows the value and description for each Payment Token Expiration Validation Result:

Payment Token Expiration Validation Result

Code	Description
00	Expiration Date matched
01	Expiration Date not valid/mismatch
02	Expiration Date not present OR not checked OR spaces

Fraud Type Codes

Overview

The Fraud Type identifies the type of fraud reported and allows fraud information to be inserted into the GNS Fraud Repository. Use the Fraud Type Codes in these records:

Records

Record Name	Message Type	Position	Field Name
Fraud Repository Update Record	9324	262-263	Fraud Type Code
Fraud Repository Response Record	9334	262-263	Fraud Type Code

Function Codes

Overview

The Function Code identifies the special purpose for a message within its message type. This field is alphanumeric and is used in many messages. There are 2 Function Code tables; the first is for Authorization messages and the second is for Clearing and Settlement and Security and Fraud messages.

Function Codes (Authorizations)

Overview

This section describes the Function Code use in Authorization messages. For information about Clearing and Settlement and Security and Fraud use of Function Codes, refer to the [Function Codes \(Clearing and Settlement, Security, and Fraud\) on page 105](#).

Use the Function Codes in these Authorization records:

Records

Record Name	Message Type	Positions	Field Name

Function Codes (Clearing and Settlement, Security, and Fraud)

Overview

The Function Code identifies the specific purpose for a message within its message type. A message type distinctly identifies the type of message being sent to or from the Network (e.g., a 1240 First Presentment message type). Each record within the message has a function code indicating the specific purpose of that record.

This section describes the Function Code use in Clearing and Settlement records and Security and Fraud records. For information about Authorization use of Function Codes, refer to the [Function Codes \(Authorizations\) on page 100](#).

Use the Function Codes in these Clearing and Settlement and Security and Fraud records:

ICC Chip/PIN Indicator Codes

Overview

The Integrated Circuit Card (ICC) Chip/PIN Indicator Codes are unique codes assigned by the Network to indicate whether or not a Chip or a Chip and PIN transaction occurred.

Use the ICC Chip/PIN Indicator Codes in these records:

Records

Record Name	Message Type	Position	Field Name
POS First Presentment	1240	784-785	ICC Chip/PIN Indicator
On Us POS First Presentment	1340	784-785	ICC Chip/PIN Indicator

This table supplies the value and description for each ICC Chip/PIN Indicator Code:

ICC Chip/PIN Indicator Codes

ICC Chip/PIN Indicator Code	Description
NN	Transaction was not Chip or PIN
YN	Transaction was Chip only
YY	Transaction was Chip and PIN
YC	Transaction was Chip but PIN failed due to the Card
YO	Transaction was Chip and Online PIN was used

Institution Identification Codes

Overview

The Institution Identification Code describes the unique identification number of the AEGNS division or system forwarding or receiving the data record. Institution Identification Codes include codes for the Originating Institution, Forwarding Institution, Sending Institution, Receiving Institution, and Destination Institution.

Use the Institution Identification Codes in these records:

To ensure the understanding of which Merchant Category Code should be assigned to the Card Acceptor, a high level description is provided below. The descriptions are listed by numeric code.

Note: The term “NEC” refers to “Not Elsewhere Classified”.

MCC Mapping

The MCCs are mapped to the codes below **for your convenience only**. No edits are implied by this mapping. All edits and any additional explanation of code usage within the messages is located in the Programming Notes in the Network Specifications manuals.

Refer to the individual sections for more instruction.

[AEGNS Feature Codes on page 3](#) are enhanced functionality through specific messages on the Network.

[Report Category Codes on page 436](#) map each MCC to a high level industry type (i.e., retail, lodging, etc.) to assist Participants in providing the contractual Program Progress Reports.

[Stand-In Parameter Codes on page 442](#) specify a set of Stand-In Authorization parameters to be used by the Network when performing stand-in for an Issuer.

[Format Codes on page 85](#) classify the type of industry specific detail to be provided in an addendum, transaction description, and additional amount fields for a Presentment message.

Although listed in the Merchant Category Codes table, codes indicated as Reserved are not valid for use.

The following table provides the value and description for each Message Reason Code. For each message type, a “•” indicates that the code is valid for the message type and a blank indicates the code is not valid for that message type. There are Feature Codes (examples: 02, AD, NS, etc.) that can be valid for a Message Reason Code and message type. See [AEGNS Feature Codes on page 3](#) for a list and description of the Feature Codes. Please refer to the feature description and Programming Notes for the message type to ensure understanding of the edits.

Note: The text in parentheses refers to the Message Reason Code Description referenced in the *Business and Operational Policies* manual.

Message Type Identifiers

Overview

The Message Type Identifier distinctly identifies the type of message being sent to or from the Network.

Use the Message Type Identifier Code values in the following records. The Usage column indicates that the code is used in the Authorizations (A) process, the Clearing and Settlement (CS) process, the Security and Fraud (SF) process, Reporting (R) process, or for Data Collection (DC) process. Some codes are used in more than one process.

Point of Service Data Codes

Overview

The Point of Service Data Code is a series of codes that identify terminal capability, security data, and specific conditions present at the time a Transaction occurred at the point of sale. The Point of Service Data Code consists of twelve positions, and each position has a list of values. For example, Position 1 indicates the Card Data Input Capability, which may be one (1) of several values such as Magnetic stripe read, Integrated Circuit Card (ICC), Key entered, etc. Each position identifies a particular value related to the Transaction. All twelve values are captured when the Point of Service Data Code is used in a message.

Use the Point of Service Data Codes in these records:

This table supplies the value and description for each Point of Service Data Code:

Position	Point of Service Data Code Name
1	Card Data Input Capability
2	Cardmember Authentication Capability
3	Card Capture Capability
4	Operating Environment
5	Cardmember Present
6	Card Present
7	Card Data Input Mode
8	Cardmember Authentication
9	Cardmember Authentication Entity
10	Card Data Output Capability
11	Terminal Output Capability
12	PIN Capture Capability

Position 1 – Card Data Input Capability

The Point of Service Data Code in Position 1 indicates the Card Data Input Capability. This is the primary capability of the terminal for entering Card information.

Card Input Capability Codes

Card Input Capability Code	Card Input Capability Description
0	Unknown
1	Manual, no terminal
2	Magnetic stripe read
3	Optical Code (e.g., Bar code, QR code)
4	Optical Character Recognition (OCR)
5	Integrated Circuit Card (ICC)
6	Key entered
7	Reserved for ISO use
8	Reserved for national use

Card Input Capability Codes (continued)

Card Input Capability Code	Card Input Capability Description
9	Reserved for private use
A	Credentials On File
B-I	Reserved for ISO use
J-R	Reserved for national use
S-Z	Reserved for private use

Position 2 – Cardmember Authentication Capability

The Point of Service Data Code in Position 2 indicates the primary Cardmember Authentication Capability of the terminal. This is the method available to verify the Cardmember at this terminal. When no order of priorities can be made, value “6” shall be used.

Cardmember Authentication Capability Codes

Cardmember Authentication Capability Code	Cardmember Authentication Capability Code Description
0	No electronic authentication
1	PIN
2	Electronic signature analysis
3	Biometrics
4	Biographic
5	Electronic authentication inoperative
6	Other
7	Reserved for ISO use
8	Reserved for national use
9	Reserved for private use
A-I	Reserved for ISO use
J-R	Reserved for national use
S-Z	Reserved for private use

Position 3 – Card Capture Capability

The Point of Service Data Code in Position 3 indicates the Card Capture Capability of the terminal in use.

Card Capture Capability Codes

Card Capture Capability Code	Card Capture Capability Code Description
0	None
1	Capture
2-4	Reserved for ISO use

Reject Reason Codes

Overview

The Reject Reason Codes indicate why the Network rejected the file or record. Up to ten (10) Reject Reason Codes may be used in a rejected message.

AEGNS has introduced informational codes for those records that do not reject but need extra explanation regarding the processing. These Informational (0000 series) Codes and Reject Reason Codes can be found in the following records:
