

Daily Activity Process

The Daily Activity Process provides Participants with the ability to facilitate their own settlement reconciliation and reporting needs from a single source

This process is available for all participants.

Overview

The Daily Settlement Process delivers a comprehensive view of daily activity that can reduce and simplify the time the Participant spends on reconciliation and settlement. The final inclear of the day initiates the Daily Activity Process and the creation of the Daily Activity Report and the Daily Activity File.

Why?

Efficient settlement processes are a keystone of any business relationship. In order to continue to provide succinct and relevant information to our Participants on a daily basis on their financial position, the Daily Activity Process was developed.

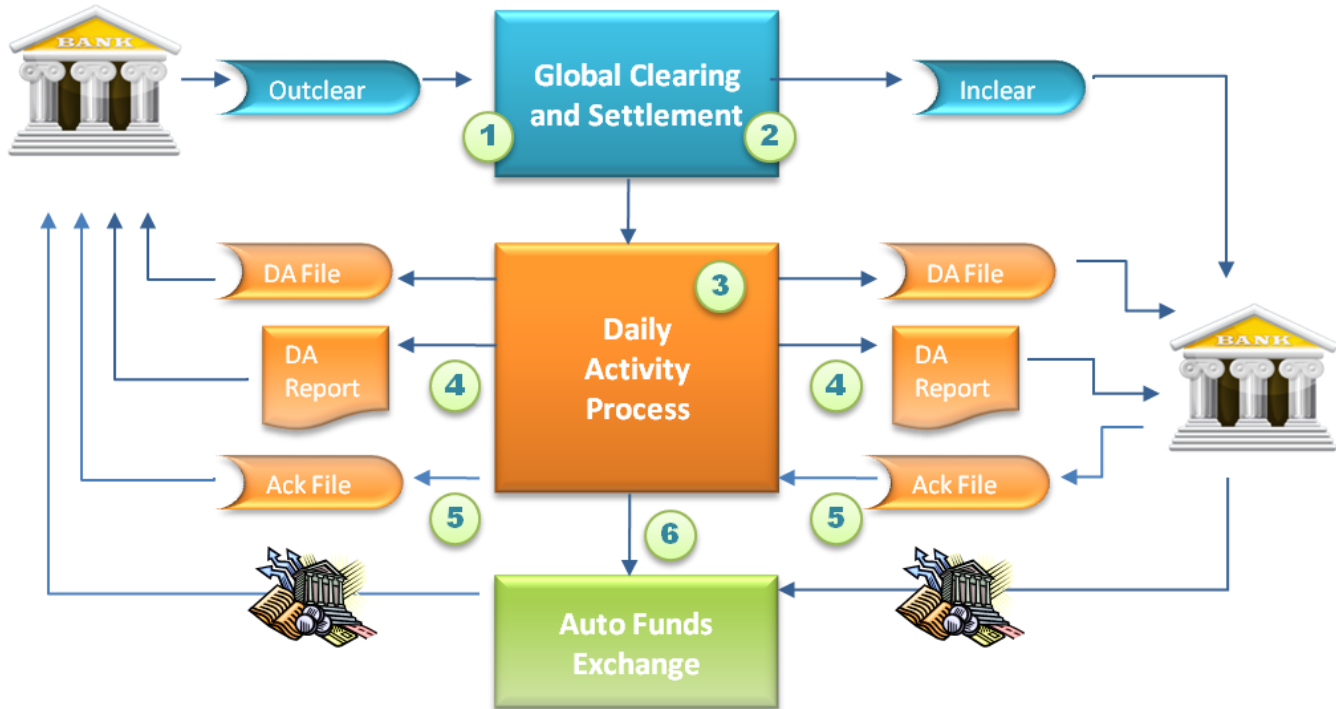

The process is based on feedback to provide a snapshot view of daily settlement, file status and a detailed file to utilize for automated reconciliation programs.

Participant Benefits:

- Increases settlement efficiency
- Provides daily key business indicator information
- Provides a method to automate reconciliation and volume reporting
- Details transaction reporting in a flat file format
- Enables auto-reconcile or Participant-created custom reporting
- Allows data to be split into multiple files based on processor identification

Daily Activity Process

How It Works

Process Steps

1. Once a file is accepted by Global Settlement Systems, the Capture, Settle and Route stages forward process specific information to the Daily Activity Process (DAP).
2. The final inclear of the day initiates the Daily Activity Process and the creation of the Daily Activity Report and the Daily Activity File.
3. The Daily Activity Process summarizes each organization's daily activity for the reporting period.
4. The Participant's daily activity is available in two formats:
 - A Daily Activity Report (DAR) containing consolidated information of Participant's activity for purposes of financial and daily activity reconciliation. Receipt of this report is mandatory.
 - A Daily Activity File (DAF) containing consolidated information of a Participant's daily transaction activity. Receipt of this file is optional. Participants can use the DAF to automate reconciliation processes, create customer reporting or segment activity for other purposes.
5. Participants must acknowledge receipt of the Clearing and Settlement Inclear File and the Daily Activity File by forwarding the Participant File Acknowledgment (1824) message to the Network.
6. Automated Funds Exchange occurs. For detailed information on Automated Funds Exchange, please refer to GNSweb for the Automated Funds Exchange Product Guide.

Daily Activity Process

Implementation Considerations

The Daily Activity Report is a mandatory report for all Participants. Settlement information includes:

- Net Settlement Summary
- Gross Settlement Summary
- Network Fee Summary
- Issuer Rate Summary

Reconciliation Information includes:

- Warehoused Transactions
- Non-financial Transactions*
- Issuer rate revenue by Industry Segment
- Non-cleared Transaction Summary*
- Returned Transaction Summary*
- Network Fee Summary by VBU

* Not included in settlement amounts

The Daily Activity File is an optional component, requiring Phase I testing. Record layout depends on transaction type.

Structure of file is as follows:

- DAF Header (1324)
- Detail Records (1644)
- DAF Trailer (1325) (new message) with counts and amounts to verify file integrity

Features of the file:

- Fixed 600 byte record length
- PKZIP enabled
- Transaction level

Certifications and Requirements

Certification for receipt of Daily Activity Report (DAR)

- After validating the File Name established, Certification Testing Center sends a dummy DAR to the Participant. Once a Participant advises that they are able to receive the DAR, and confirm that it is legible, the DAR is activated at the time and date of the Participant choosing (except on Friday – Sunday).

Optional certification for receipt of Daily Activity File (DAF)

- Requires Phase I testing. After successful Phase I testing is complete, File Name is validated, and a test DAF is sent to the Participant. Participant will receive the file and send an acknowledgement (1824) with the appropriate code and Org ID which are unique to the file.

Optional Acknowledgement File

- Participants must acknowledge receipt of the Clearing and Settlement Inclear File and the Daily Activity File by forwarding the Participant File Acknowledgment (1824) message to the Network.

Daily Activity Process

Frequently Asked Questions

How often does the Daily Activity Process operate?

The Daily Activity Process will be initiated once every day, seven days per week.

When will Daily Activity Process occur for a particular business day?

The Daily Activity Process occurs after the last inclear file is sent for each day. The Participant chooses the time each inclear file is sent, and the network recommends the same time every day.

What are the benefits of using the DAF in addition to the DAR?

Participants can use the DAF to automate reconciliation processes, create customer reporting or segment activity for other purposes. The DAR may include details of financial activity that were not received through a submitted Transaction. In these cases, the Participant may not have been certified to receive the financial message. The DAF will include details of these messages.

Can DAF/DAR be customized?

The DAF is a flat file that allows the Participant to create custom reporting and to post data to their internal reconciliation systems.
