

Requesting Access to the Test Simulator

Before applying for access to the Network Test Simulator, you must have an active Knowledge Base account and your organization has an active agreement and license to use the Network Test Simulator. Having a Knowledge Base account does not mean that you automatically will have access to the Network Test Simulator. Once you have access to Knowledge Base, you need to contact the Network Test Simulator Support Team at "Test Tool Ticket" portal by using this URL:

<https://gns.secure.force.com/gcsengagement/GCSCertificationTestToolTicket>

The following information is required:

Name / Knowledge Base User ID / Company Email / Company / Business Justification

When the Network Test Simulator Support Team receives your request, your information will be validated, and your organization's profile will be updated. This update will include your job function and level of access as indicated in your organization's license agreement. Upon validation, the GNS User Services team will be contacted with the request to upgrade your profile. GNS User Services has an SLA of three business days to process this request.

Once you receive a confirmation email from the Network Test Simulator Support Team that your profile has been updated, please follow the steps below to complete the application.

- 1) Login to Knowledge Base at
<https://network.americanexpress.com/en/globalnetwork/KnowledgeBase/>
- 2) Click Enroll for more services link in the My Services tab
- 3) Select the GNS Test Simulator option from the Services menu
- 4) Complete the Service Information form (no special characters are allowed)
 - 1) Provide a business justification
 - 2) In the Requested Organization Names field, provide the name and Org ID of the organizations you support.
 - 3) Select role from the drop-down menu.
 - 4) Read the Terms and Conditions, check mark the box if you accept and click Submit.
 - 5) GNS User Services will review your request in three business days.
 - 6) Once your request is processed and approved, you will see the Test Simulator tile in your Services tab.
